Press Release

FOR IMMEDIATE RELEASE

Genesis Restorations and HEPA Air Filtration

Langley, BC – February 18th, 2008 – It has long been the policy of Genesis Restorations Ltd. to look out for the health and safety of our workers and the occupants of buildings that we remediate and repair. One such example was the policy instituted in 2007 of installing HEPA air filtration devices into all job sites where the contamination present and/or the work requires stirring up the air mechanically using fans.

A good example is that whenever drying equipment is installed after a water claim, a HEPA air scrubber is installed to actively remove airborne particulate that is stirred up into the air, thereby protecting the occupants during the restorative process.

Amazingly, this is not a standard procedure and is again an example of Genesis Restorations Ltd. leading the way to protect the health of our clients.

A recent study published in the February issue of the American Journal of Respiratory and Critical Care Medicine that shows a definite and measurable health benefit from as little as 48 hours of filtration operation.

Here are two links that provide more details:
